

Operating System: Project 2

Instructed by *Wei Xu*

Due on Nov 19, 2020

child_*.c

`child_1` invokes `child_2` first and waits for its finish. Then `child_1` outputs its own text. Finally, it invokes `child_3`, which contains an infinite loop. In this test, the bash will never exit.

text_halt.c

This program plays the role as an evil user who invokes `halt()`. In this test, the OS prints error message to console and the bash does not really halt.
